

ContextFlow | compliance note

FEG Challenge 02 - EU / Croatia - sample-data prototype - 9 September 2026

Implemented controls, evidence and production dependencies

FEG requirement	Implemented demo control	Supporting evidence	Production dependency
Sample / anonymized data	Deterministic fictional sports catalogue. Local and Edge paths ignore live caches and disable provider requests.	34 backend tests include poisoned cache, refresh, details and Edge routes. Edge v14 deployed.	Verify final build/network trace; no real player or production feed data in the hackathon.
Privacy / GDPR / ePrivacy	Random demo identity; explicit microphone start. Task, source, latest instruction and consent are persisted. Fictional inputs required.	Shared session contracts; native permission flow; sample handoff capture.	Controller/processor roles, DPIA, purpose/legal basis, retention/deletion, DPA and transfer/region review.
Notification consent	Optional consent off by default, persisted with time and zone. 22:00-08:00 quiet hours, 3/day and 60-minute gap.	Tests: withdrawal, overnight boundaries, caps, deduplication, stale candidates and restricted profiles.	Obtain real marketing permissions; OS permissions, localization and production delivery audit. Defaults are not statutory limits.
AI transparency	AI identification and action-context card show instruction, requested action, sources/age and confirmation requirement.	Shared instruction/context fields; physical iPhone source-card and typed native journey captured. Human-spoken validation remains open.	Article 50 assessment, disclosures and recommendation rationale/uncertainty if recommendations are added.
Accessibility	Labelled native controls and at least 44-point touch targets in voice UI; text alternatives and reduced-motion design.	Code inspection and native screenshots; no conformance claim.	WCAG 2.1 AA / European Accessibility Act review, VoiceOver/TalkBack, dynamic text, contrast and captions on devices.
Age / identity / KYC	Unknown eligibility by default. Synthetic adult, unverified and underage records feed shared action checks.	Touch, voice, tool and handoff attempts blocked by tests; fixture selection is on-screen only.	Real age/identity verification and operator KYC / AML controls. Demo fixtures are not legal verification.
Exclusion / responsible play	Separate synthetic at-risk/excluded records; voice cannot override them. Optional alerts suppressed. Exact confirmation, limits and pause remain.	Override, downgrade/review and restricted-profile tests; in-app suppression explanation.	Croatian exclusion-register checks, freshness, binding periods, RG policy, help routes and harm monitoring.
Safety / governance	Requested break reminders and essential microphone controls remain available. Research never authorizes a bet. Receipts are idempotent.	Action and review tests; native stop controls. Human-spoken end-to-end acceptance still pending.	FEG legal review before production; risk ownership, incident handling and operational release sign-off.

Scope: a demonstration of safeguards, not legal certification. Production integration and real identity services are outside this build. FEG legal review is required before production.
