What success looks like

1,000 people · 500 per arm · 30 days · later retention follow-up

Useful app opens

Per assigned user, per week

Widget adoption

Eligible treatment users

Surface engagement

Glances and deliberate continuations

Opt-in retention

Consent retained after exposure

Also track task success, off-app completion, opt-outs and harmful-play indicators.

The value and the cost

Illustrative monthly operating case — usage calibration remains open.

Treatment adoption	10%	20%	30%
Adopters	50	100	150
Voice tasks	200	400	600
Operating cost	€201	€258	€314
Contribution to break even ¹	€3.03	€1.58	€1.09

€9,120

illustrative upfront effort

¹ Per adopter, after assumed support savings. Excludes recovery of upfront effort and unquoted identity costs.

Control stays with the user

Permission, eligibility and exact review travel with the task.

Optional match alerts
Off by default. Only for matches you follow.

☐

Reduced motion
Follows device preference; no continuous UI animation

Automatic

Your notification limits
22:00–08:00 device-local quiet hours · at most 3 optional alerts daily · at least 60 minutes apart. Proposed demo defaults.

Requested break reminders and microphone controls remain available.

Test optional match alert

No delivery attempts yet.

Off by default

Optional notifications require consent.

22:00–08:00

Device-local quiet hours.

3 per day · 60-minute gap

Proposed demo defaults.

Explicit confirmation

Voice cannot override eligibility.

The next screens

A smaller glance. A larger workspace. The same chosen task.

WATCH CONCEPT · not built

MAC CONCEPT · not built

A 30-day FEG pilot. An integration owner. Agreed success measures.

Technical evidence

What is demonstrated — and what still needs inspection.

Evidence	Checkpoint
Shared action + guardrail tests	34 passing backend tests
Sample-only local and Edge feed	Deployed Edge version 14
Native recording	iPhone: sample flow + typed follow-up
Android	Release built; emulator captures
Acceptance gates	Human speech, final native QA, PowerPoint

Screenshots prove only the state and input method they actually show.

Published competitor capabilities

The distinction is the demonstrated combination of handoff and surfaces.

Capability	AceAI	BetHarmony	ContextFlow
Conversational research	Published	Published	Sample demo
Action / slip support	Published	Published	Sample demo
Context memory	Published	Published	Persisted task
External research handoff	Unknown	Unknown	Demonstrated
Native OS surfaces	Unknown	Unknown	iPhone capture

Unknown means unverified in these sources. Watch and Mac remain concepts.

Detailed economics

Assumed €3 contribution + €1 support saving per adopter / month.

Monthly scenario	10%	20%	30%
Operating cost	€201.29	€257.57	€313.86
Benefit	€200.00	€400.00	€600.00
Net benefit	-€1.29	€142.43	€286.14
Payback on €9,120	None	64.0 mo	31.9 mo

Public list prices ≠ the final invoice. Assumed workloads ≠ measured usage.

Missing: usage calibration, Azure SKU / contract and production identity-service quotes.

Live-demo runbook

Five-minute core + seven-minute walkthrough leaves a three-minute buffer.

Before the stage	Sample profile · one match · warm microphone · offline backup
-------------------------	---

Opening	Human: “Change that to five.” Hold for the actual result.
----------------	---

Fallback	After 8 seconds without a result, announce the recording.
-----------------	---

Walkthrough	Research → voice → review → confirm → native surfaces
--------------------	---

Acceptance	3 human runs · matching receipts · native QA · PowerPoint
-------------------	---
